

BIT4107-Mobile Application Development

Student Name: Prisca Mukuhi

Admission Number: BIT/2024/73199

School/faculty: School of computing and informatics

Programme: Bachelor of Science in Information Technology

Academic Year: Fourth year

Semester: MAY-AUGUST 2026

Lecturer Name: Michael Nyoro

Phone Number: 0706688630

BIT4107-Mobile Application Development	1
Week 1: Introduction to mobile development.....	2
1.1 Tools/software used	3
1.2 Personal reflection	3
Week 2: Mobile Development Environment.....	4
2.1 Personal reflection	4
Week 3: User Interface Design	5
3.1 Personal reflection	6
Week 4 : event handling and user interaction	6
4.1 Personal reflection	7
Week 5: Data Management.....	7
5.1 Personal Reflection	8
Week 6 : Networking and APIs	9
6.1 Personal Reflection	10

Week 1: Introduction to mobile development.

Figure 1.1 Android Studio SDK Manager window showing installed platform tools.

Figure 1.2 Android Virtual Device (AVD) manager interface displaying a newly created emulator profile.

1.1 Tools/software used

1. Android Studio
2. Flutter SDK
3. Android Smartphone
4. Dart Plugin

1.2 Personal reflection

Setting up Android Studio required careful configuration of system paths and the SDK manager. Managing these initial dependencies was challenging but crucial for ensuring that the development environment could compile mobile applications smoothly.

Week 2: Mobile Development Environment.

Figure 2.0 Terminal window running

2.1 Personal reflection

Integrating the Flutter plugin into Android Studio allowed me to leverage cross-platform tools. Running the doctor command line tool verified that my toolchain was fully compliant and ready for project initialization.

Week 3: User Interface Design

Welcome to LaundryLink

Figure 3.1 Registration Screen layout showing the main sign-in page design.

3.1 Personal reflection

This week I learned that sketching out the login and signup screens first saved me a lot of time. It helped me figure out where to place the text boxes and buttons so the app feels clean and easy for a student to use right away.

Week 4 : event handling and user interaction

The image shows a registration screen with a light blue background. At the top, the word "Register" is centered in a bold, dark font. Below it are five input fields, each with a small icon on the left: a person icon for "Full Name", a student ID card icon for "Student ID", an envelope icon for "Email", a lock icon for "Password", and another lock icon for "Confirm Password". To the right of the "Password" and "Confirm Password" fields are eye icons to toggle password visibility. At the bottom of the form is a large blue button with the word "Register" in white. Below the button, the text "Already have an account?" is followed by a blue link labeled "Login".

Figure 4.0 Registration screen

4.1 Personal reflection

This week I learned Implementing event listeners for form fields and button taps brought the interface elements to life. Developing the toggle event handler for the password eye icon helped me understand how state shifts alter structural layout behaviors based on direct user interactions.

Week 5: Data Management

5.1 Personal Reflection

This week I learned the importance of organizing and managing data effectively in mobile applications. Planning how machine availability, time-slots, and student booking information would be stored helped me understand how proper data management improves accuracy, usability, and decision-making.

Week 6 : Networking and APIs

6.1 Personal Reflection

This week, integrating REST APIs with async/await requests allowed LaundryLink to fetch live machine statuses via GET and sync bookings via POST. This taught me how to handle asynchronous data flows and to emphasize local caching to prevent data loss.
